Your Touchstone Energy® Cooperative 

Vernon Electric Cooperative allows members of the Cooperative to sell excess energy from their renewable energy system. There is a one-time service charge of \$500 + tax for interconnection setup.

Distributed Generation Pre-Interconnection Checklist For Member Use (20 KW system or less)

- Application completed and returned to Cooperative
- Meeting at location with VEC Field Technician to inspect existing service equipment
- Verified there are no subtractive (sub) meters (i.e. Dual Fuel, Heat Storage, Grain Drying) on account
- Interconnection Agreement
 - Signed and returned to Cooperative
 - Cooperative signed and returned to member before inspection and anti-islanding test
- Certificate of Insurance provided to Cooperative - \$300,000 minimum liability with 30-day cancellation notification to Cooperative
- Inverter/Equipment Certification of UL 1741 Compliance documentation submitted
- Equipment Specifications submitted
- Interconnection Line-Diagram submitted
- \$500 + tax paid for interconnection services
- Wiring affidavit signed by electrician and returned to Cooperative
- Apply for rebate*

***REBATES:** Vernon Electric is offering a rebate for net-metered, new solar photovoltaic installations on Vernon Electric lines of \$250 per KW of installed capacity, up to \$750 maximum. This rebate is evaluated annually (12/31) and could change. To submit for a rebate please supply copies of paid invoices for labor and equipment. Solar panels must have been purchased within 6 months of installation.

NOTE: System shall not be energized to back-feed grid until anti-islanding test is performed by Vernon Electric personnel.
