Your Touchstone Energy® Cooperative 

Vernon Electric Cooperative allows members of the Cooperative to sell excess energy from their renewable energy system to the Cooperative at retail rate. There is a one-time service charge of \$500 for interconnection setup and a monthly Facility Charge of \$3.00 for the "sell back" portion of the meter. This is in addition to the regular monthly Facility Charge.

Distributed Generation Pre-Interconnection Checklist For Member Use (20 KW system or less)

- Meeting at location with VEC Field Technician to inspect existing service equipment
- Application completed and returned to Cooperative
- Interconnection Agreement
 - Signed and returned to Cooperative
 - Cooperative signed and returned to member before inspection and anti-islanding test

NOTE: System shall not be energized to back-feed grid until anti-islanding test is performed by Vernon Electric personnel.

- Certificate of Insurance provided to Cooperative - \$300,000 minimum liability
- Inverter/Equipment Certification of UL 1741 Compliance documentation submitted
- Equipment Specifications submitted
- Interconnection Line-Diagram submitted

Bi-directional metering:

- \$500 paid for interconnection services
- Wiring affidavit signed by electrician and returned to Cooperative

REBATES: Vernon Electric is offering a rebate for net-metered, new solar photovoltaic installations on Vernon Electric lines of \$250 per KW of installed capacity, up to \$750 maximum. This rebate is evaluated annually (12/31) and could change. To submit for a rebate please supply copies of paid invoices for labor and equipment. Solar panels must have been purchased within 6 months of installation.
